Introduction to Web Tools

This document contains a Reference Guide to the Signature Confirmation Label APIs. See the Developer's Guide (eCommerce API Technical Guides site) to learn the administrative process for gaining access to the Web Tools APIs as well as the basic mechanism for calling the APIs and processing the results. The Developer's Guide also contains information on testing and trouble-shooting.

For label specifications such as package dimensions, delivery information, etc., please refer to the Domestic Mail Manual (DMM) at <http://pe.usps.com/>.

For information specific to domestic mailpieces sent to an Army Post Office (APO), Fleet Post Office (FPOs), and or Diplomatic Post Offices (DPO) see the DMM at <http://pe.usps.com/text/dmm300/703.htm#1113810> and <http://pe.usps.com/text/dmm300/608.htm#1255642>

Note: The Request Parameter sections present the XML input tags for generating live requests along with the restrictions on the values allowed. An error message will be returned if an incorrect value is entered. Also, be aware of the maximum character amounts allowed for some tags. If the user enters more than those amounts, an error (*) will not be generated. **The Web Tool will simply pass in the characters up to the maximum amount allowed and disregard the rest.** This is important since the resulting value could prevent a correct response.

When building the XML request, pay particular attention to the **order and case** for tags. An error message will be returned if an incorrect value is entered. Remember that all data and attribute values in this document are for illustration purposes and are to be replaced by your actual values. For instance, a line of sample code may be:

```
<TrackID> EJ123456780US </TrackID>
```

In this instance, you will replace "EJ123456780US" with the tracking ID for the package.

(*) Note: The exception regarding error messages is the <ToFirm> tag, which will result in an error if the tag exceeds 32 characters.

Before you get started:

For information on registering and getting started with Web Tools, please refer to the [Step-By-Step guide](#) found on the [Technical Documentation](#) section of the Web Tools page on usps.com/webtools.

Label API access requires extra permissions; please contact the Internet Customer Care Center (uspstechnicalsupport@mailps.custhelp.com) to request access. Indicate "Label API Access" in the subject line and explain in the body of the email:

1. How the shipper intends to purchase and apply postage to the labels
2. If the label image provided by the API will be modified in any way by the shipper or the software

Signature Confirmation Label API

Overview

With the USPS's Signature Confirmation, you (or your customers) can access information on the Internet about the delivery status of First-Class Mail parcels, Priority Mail and Package Services (Retail Ground, Media Mail, and Library Mail), including the date, time, and ZIP Code of delivery, as well as attempted deliveries, forwarding, and returns. Signature Confirmation service is not available to APO/FPO addresses, foreign countries, or most U.S. territories.

The Signature Confirmation Label Web Tool generates a label (and accompanying Customer Online Record), either with or without shipping addresses and information depending on the request. The label returned by the Web Tool is printed by the sender and attached to the package.

Please note that the API labels are printed without postage. Postage must be purchased and applied separately. For more information on postage payment methods, see <https://www.usps.com/business/postage-options.htm>.

Note: The "SignatureConfirmationCertifyV4" API signature is for testing purposes and will not generate usable labels and barcodes.

Tag Descriptions

Tag Name	Occurs	Description	Type	Validation
SignatureConfirmationV4.0 Request	required once	SigConfirmCertifyV4.0Request The "Certify" form of the request is used for integrator testing. It produces a label that is not suitable for mailing and must not be entered into the US Postal System. Certify requests do not require additional permissions to invoke.	(group)	
SignatureConfirmationV4.0 Request / @USERID	required	This attribute specifies your Web Tools ID. See the Developer's Guide for information on obtaining your USERID.	string	

Tag Name	Occurs	Description	Type	Validation
SignatureConfirmationV4.0 Request / Option	optional	This tag is for future use.	empty	
SignatureConfirmationV4.0 Request / Revision	optional	This is for versioning of the API's and for triggering response tags for future versions. In this API use a value of 2 to trigger new functionality, namely the new dimensional logic. For example: <Revision>2</Revision>	string	
SignatureConfirmationV4.0 Request / ImageParameters	Optional	Enumeration of image parameter to return barcode only or to crop image.	(group)	
SignatureConfirmationV4.0 Request / ImageParameters / ImageParameter	optional, up to 2 times	Returns alternate barcode only label image. "BARCODE ONLY" label option returns a barcode and Package ID Code (PIC) number without the return and delivery name and address. "CROP" reduces the image size to half-sheet (approximately) "SEPARATECONTINUEPAGE" will force the continuation page (if the item count causes the need for a continuation page) onto a separate page. For example: <ImageParameter>BARCODE ONLY</ImageParameter>	string	Enumerations: BARCODE ONLY CROP SEPARATECONTINUEPAGE
SignatureConfirmationV4.0 Request / ImageParameters / LabelSequence	Optional	To be used in the case of multiple packages. Not required if only one package.	string	minOccurs="0" maxOccurs="1"

Error Responses

Error conditions are handled at the main XML document level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

Errors that are further down in the hierarchy also follow the above format.

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center (uspstechnicalsupport@mailps.custhelp.com)
