Introduction

This document contains a Reference Guide to the eVS Label API. See the Developer's Guide (eCommerce API Technical Guides site) to learn the administrative process for gaining access to the Web Tools APIs as well as the basic mechanism for calling the APIs and processing the results. The Developer's Guide also contains information on testing and trouble-shooting.

For label specifications such as package dimensions, delivery information, etc., please refer to the Domestic Mail Manual (DMM) at http://pe.usps.com/.

For information specific to domestic mailpieces sent to an Army Post Office (APO), Fleet Post Office (FPOs), and or Diplomatic Post Offices (DPO) see the DMM at http://pe.usps.com/text/dmm300/703.htm#1113810 and http://pe.usps.com/text/dmm300/608.htm#1255642

Before you get started:

Whether you are a new or existing mailer, USPS strongly suggests a conversation with you to discuss your business requirements so your account will be properly configured. To initiate this conversation please contact the National Customer Support Center (NCSC) at 877-264-9693 Option 4 and request a referral to an Operations Integration Specialist (OIS) and Technical Integration Specialist (TIS). USPS will align the appropriate team to assist with swift onboarding.

Depending on your needs, your account may be configured in many flexible ways; however, each account will be configured with credentials in a master/child relationship. Minimally, credentials will be established as follows:

- A master Mailer ID is created
    - o Child Mailer IDs are created for each origin site and may be created as needed by the requirements of your business units and brands.
- A permit number is created
    - o Additional permit numbers may be created as needed by the requirements of your business units and brands
- A CAPS Debit account is created for payment processing
    - o Additional CAPS Debit accounts may be created as needed

Your Operations Integration Specialist and Technical Integration Specialist will be involved at the local and national levels to ensure successful launch and introduction to appropriate production support teams.

1 eVS Label API

2.1 eVS Label Request

The Request Parameter sections present the XML input tags for generating Live requests and the restrictions on the values allowed. An error message will be returned if an incorrect value is entered. Also, be aware of the maximum character amounts allowed for some tags. If the user enters more than those amounts, an error will not be generated. **The Web Tool will simply pass in the characters up to the maximum amount allowed and disregard the rest.** This is important since the resulting value could prevent a correct response.

When building the XML request, pay particular attention to the **order and case** for tags. An error message will be returned if an incorrect value is entered. Remember that all data and attribute values in this document are for illustration purposes and are to be replaced by your actual values. For instance, a line of sample code may be:

<div align="center">

<ZipDestination>12345</ZipDestination>

</div>

In this instance, you will replace "12345" with the destination ZIP Code for the domestic-bound package.
